Semi-automated system with swing door drive on the active leaf and door closer on the passive leaf for fire and smoke protection doors

## **AREAS OF APPLICATION**

- → Fire and smoke protection doors
- → Right and left double leaf single-action doors
- ightarrow Single-action doors up to 3200 mm hinge clearance with link arm installation
- ightarrow Single-action doors up to 2800 mm hinge clearance with roller guide rail installation
- → Minimum hinge clearance 1415 mm, minimum width of the passive leaf 615 mm (depending on the type of installation)
- → Interior and exterior doors with high access frequency
- → Symmetrical and asymmetrical division of door possible
- → Transom installation hinge and opposite hinge side
- → Hold-open systems with integrated hold-open function country-specific specifications must be observed

#### **PRODUCT FEATURES**

- → Smart swing function for easy manual door opening
- → Closing force of EN4-7 with variable adjustment
- ightarrow Opening and closing speed can be individually adjusted
- → Mechanical latching action when operated without current, and electrical automatic unit latching action in regular operation, which accelerates the door shortly before it is closed
- → Mechanical and electrical closing sequence control holds the active leaf in the waiting position until the passive leaf is closed
- → Low-energy function opens and closes the door with reduced speed, fulfilling the highest safety demands
- → Obstacle detection detects an object through contact and stops the opening or closing process
- → Automatic reversing detects an obstacle and returns to the opening position
- → Push & Go function triggers the automatic drive following light manual pressure on the door leaf
- → Drive can be used with roller guide rail or link arm
- → Servo function for motorized support when manually opening the door
- → Optional radio reception board for wireless activation by radio transmitter
- → Smoke switch control unit can be connected, whose signal makes the door close automatically in the event of a fire
- → Freely configurable inputs and outputs for different functions
- ightarrow Can be networked, and integrated into the building automation via open standard (BACnet)
